Program

Master's, Doctoral and Postdoctoral Track Program: Education and Psychology

1. Open Doors winner's skill set

The winner should know:

- concepts and theoretical foundations of psychology, social work, and the periodization of personality development;
- applied aspects of pedagogical psychology and psychodiagnostics of digital educational environments;
- current research trends in psychology, the possibilities and risks of using artificial intelligence technologies in psychology;
- the basics of psychometrics, psychological testing, and profiling.

The winner should be able to:

- create innovative educational programs taking into account the achievements of neuropsychology and anthropology;
- effectively interact with students and colleagues in a digital educational environment, motivate them to achieve high results;
- apply methods of inclusive education and upbringing;
- use interactive digital methods of training, diagnostics and correction;
- provide psychological assistance, engage in psychoprophylaxis and social rehabilitation.

The winner should be capable of:

- applying knowledge in interdisciplinary contexts and critically evaluating scientific literature.

2. List of degree programs

2.1. List of doctoral programs

5.3.1 General psychology, personality psychology, the history of psychology

5.3.4 Educational psychology, psychodiagnostics of digital learning environments

5.3.5 Social psychology, political and economic psychology

5.3.6 Medical psychology

5.8.3 Correctional pedagogy

Program

2.2. List of master's degree programs

37.04.01 Psychology

37.04.02 Conflict management

39.04.02 Social work

44.04.02 Psychopedagogy

44.04.03 Special education (defectology)

3. Content

Field of science 1. Psychology, applied

Age psychology

1. Theories of Mental Development
2. Infancy and Early Childhood Psychology
3. Preschool and Primary School Age
4. Adolescence and Youth
5. Adulthood and Aging Psychology

General Psychology

1. Psychology as a science studying the psyche (mental phenomena)
2. The psyche and mental phenomena
3. Cognitive mental processes
4. Mental states
5. Mental properties and the concept of personality in psychology
6. Motivation and the hierarchy of needs

Educational psychology

1. Psychology of Learning
2. Psychology of Upbringing (Moral and Social Development)
3. Psychology of pedagogical activity
4. The motives of the teaching

Social Psychology

1. Social perception
2. Group processes
3. Prejudice and stereotypes
4. Interpersonal attraction

Program

5. Social psychology of aggression and conformity
6. Methodology of social psychology

Field of science 2. Psychology

4.2. Recommended online courses

Field of science 1. Psychology, applied

Online course	Link	Course description
Development Across the Lifespan (Coursera)	https://www.coursera.org/learn/development-across-the-lifespan	This course provides a comprehensive introduction to human development from conception through old age. Designed for psychology students, educators, healthcare professionals, and parents, it explores the physical, cognitive, and socioemotional changes that occur throughout life. The curriculum follows a chronological approach—covering prenatal development, infancy, childhood, adolescence, adulthood, and aging. Key topics include attachment theory, language acquisition, moral reasoning, identity formation, and cognitive decline.
2. Mental Health Development, Difficulties, and Disorders (Coursera)	https://www.coursera.org/learn/mental-health-development-difficulties-and-disorders	This course explores mental health through a developmental lens—examining how psychological difficulties emerge, manifest, and can be addressed across the lifespan. Designed for educators, healthcare professionals, and caregivers, it bridges the gap between developmental psychology and clinical practice.The curriculum covers common mental health conditions—including anxiety, depression, conduct disorders, and eating disorders—while emphasizing early identification and intervention.

Program

Online course	Link	Course description
Human Development: Prenatal to Death (Doane University)	https://riseupp.com/course/doane-university/human-development-prenatal-to-death	This complete journey through human development from conception to end-of-life. Designed for psychology majors, pre-health students, and lifelong learners, it integrates biological, psychological, and social perspectives on the human experience. The curriculum follows a life-stage structure—prenatal development, infancy, childhood, adolescence, adulthood, and aging. Key topics include genetic influences, motor and cognitive milestones, identity formation, relationships, career development, and the psychology of death and dying.

Program

Field of science 2. Psychology

Online course	Link	Course description
Visual Perception and Visual Illusions	https://openedu.ru/course/spbu/ZRI_VOS_ENG/?session=spring_2023	This course explores the science of visual perception and the reasons why the brain can sometimes produce perceptual illusions. Designed for psychology students, educators, and other interested learners, it examines the neurobiological and cognitive mechanisms underlying vision. The curriculum covers visual pathways, color vision, depth perception, motion processing, and the mechanisms of optical illusions. Participants analyze classic experiments and learn to distinguish between bottom-up sensory processing and top-down cognitive influences.
Foundations of Educational Psychology — New Learning Online	https://newlearningonline.com/new-learning/chapter-6/video-mini-lectures/foundations-of-educational-psychology	This online module, part of the "New Learning" series, introduces the foundational theories of educational psychology. Designed for teachers, instructional designers, and education students, it explores how people learn—from behaviorism and cognitivism to constructivism and social learning theory.The curriculum traces the evolution of learning theories through key figures like Piaget, Vygotsky, Skinner, and Bandura. Participants examine how these frameworks translate into classroom practice—shaping lesson design, assessment strategies, and differentiated instruction.
Learning, Knowledge, and Human Development — Coursera	https://www.coursera.org/learn/learning-knowledge-human-development	This course offers a comprehensive exploration of how humans learn and develop across the lifespan. Designed for educators, psychologists, and lifelong learners, it bridges classical theories with contemporary research in cognitive science and developmental psychology. The curriculum examines learning through multiple lenses—behavioral, cognitive, constructivist, and sociocultural perspectives.

Field of science 3. Psychology, educational

Online course	Link	Course description
Providing Social, Emotional, Behavioral, and Special Education Services in Schools	https://www.coursera.org/learn/providing-social-emotional-behavioral-and-special-education-services-in-school	This course focuses on comprehensive support for students with special educational needs. The program covers four key areas: social development, emotional well-being, behavioral interventions, and special education services. Learners will explore legal foundations (including IDEA), learn to develop individualized education plans (IEPs), implement positive behavioral strategies, and conduct functional behavior assessments. The course offers practical tools for school psychologists, social workers, and teaching assistants.
Motivating Modern Learners: What Parents and Teachers Need to Know	https://www.coursera.org/learn/motivate-genz-learners	The online course introduces theories of motivation and their practical application. Participants analyze typical motivational problems and learn how to solve them using the principles they have learned. As a result, they develop strategies to increase the motivation of Gen Z students. The course includes quizzes and discussion forums. It was developed in collaboration with the National Institute of Education (NIE) at Nanyang Technological University, Singapore.
New Learning: Principles and Patterns of Pedagogy	https://www.coursera.org/learn/newlearning	The online course focuses on the transformation of education under the influence of social and technological changes. It explores three pedagogical paradigms: didactic, authentic, and transformative. Participants will learn how contemporary contexts (technology, globalization, diversity, and the knowledge society) impact teaching, learning, and student needs.

Online course	Link	Course description
Managing ADHD, Autism, Learning Disabilities, and Concussion in School	https://www.coursera.org/learn/managing-adhd-autism-learning-disabilities-and-concussion-in-school	This introductory equips educators, parents, and school staff with a foundational understanding of the most common developmental and behavioral disorders affecting children. The curriculum, led by active practitioners from Children's Hospital Colorado, covers ADHD, autism spectrum disorder, learning disabilities, and concussions.
Educating Deaf Children: Becoming an Empowered Teacher	https://www.coursera.org/learn/educating-deaf-children	This 4-week course empowers educators and caregivers working with deaf and hard-of-hearing children. Unlike medical-model approaches, this program emphasizes a bilingual-bicultural perspective, viewing deafness as a cultural and linguistic identity rather than a disability. Learners explore language acquisition strategies, classroom adaptations, and family engagement techniques. The curriculum covers sign language basics, literacy development, and inclusive teaching practices, with real-world case studies from South African schools.
Learning, Knowledge, and Human Development — Coursera	https://www.coursera.org/learn/learning-knowledge-human-development	This course provides an introduction to the major theories of learning and human development and examines how these theories inform educational practice and educational technology. Learners explore key paradigms in educational psychology, including behaviorism, brain developmentalism, and social cognitivism, while analyzing how people acquire knowledge and develop across different contexts. The course combines theoretical foundations with practical applications, offering insights into motivation, cognition, social learning, and educational decision-making

Program

Field of science 5. Psychology, social

Online course	Link	Course description
Advanced Research Methods in the Social Sciences: Quantitative Designs	https://coursebrowser.dce.harvard.edu/course/advanced-research-methods-in-the-social-sciences-quantitative-designs/	This course surveys empirical research methods in the social sciences. The purpose of this course is to teach the theory and application of hypothesis-based empirical research methods to help students create well-designed thesis projects. It gives students a sound grounding in a broad range and variety of approaches, including experimental designs, surveys, case studies, and mixed-methods research, with special attention to sampling, measurement, and threats to validity.
SOC 5250 - Research Design and Analysis in Social Psychology	https://wmich.catalog.acalog.com/preview_course_nopop.php?catoid=7&coid=14189	This course will provide students with the knowledge necessary to evaluate research, to understand the relationship between theory and the research operations that are used to test and generate theory, and to design and carry out original research on social psychological topics. Students will learn about the appropriate use of survey, observational, experimental and quasi-experimental methods as applied to both field and laboratory settings. Class projects will teach students to design and conduct original research in social psychology, and to analyze data using relevant statistical techniques.
Research Methods in Social Psychology	https://forrt.org/curated_resources/research-methods-in-social-psychology_2/	This course will acquaint students with the major research designs and procedures in social psychology, as well as explore recent methodological innovations that were designed to address issues unique to social psychological research. The objectives are to develop a firm grasp of the research methods available, including the application of these methods in research settings, and statistical considerations of these methods.
